Career Objective

Motivated aspiring Data Scientist with strong proficiency in Python, Machine Learning, and Spatial Data Analysis. Passionate about building predictive models, optimizing complex data pipelines using metaheuristic feature selection, and transforming raw data into actionable insights. Eager to apply advanced analytical and ML skills to solve real-world problems in dynamic, data-driven environments ranging from cyber security to environmental science.

Education

Srinath University | Jamshedpur | Bachelor of Technology in Computer Science & Engineering | CGPA: 7.4 | 2026

D.A.V Public School (NIT Campus) | C.B.S.E | Jamshedpur | Senior Secondary | Percentage: 57.8% | 2022

Central Public School | C.B.S.E | Jamshedpur | Matriculation | Percentage: 76.4% | 2020

Technical Skills

- Programming Language: Python
- Design & Creativity: Canva, PowerPoint Design
- Data Analysis & Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-Learn, Folium, Spatial Data Analysis
- Machine Learning & Algorithms: Metaheuristic Algorithms (MVO, GOA, MFO), Feature Selection, Ensemble Methods (Extra Trees, CatBoost), KNN, Neural Networks (MLP)
- Databases: OracleSQL
- Developer Tools & IDEs: VS Code, GitHub, Jupyter Notebook, Google Earth Engine (GEE) API
- Operating Systems: Windows 11 Administration & Troubleshooting.

Research & International Conferences

Android Malware Detection Using Metaheuristic Feature Selection & ML Techniques Sept 2026

- **Core Research:** Evaluated and compared three advanced metaheuristic feature selection algorithms (GOA, MFO, and MVO) to optimize Android malware detection on the high-dimensional TUANDROMD dataset.
- **Tech Stack & Impact:** Applied Python, Scikit-Learn, and various ML classifiers (Extra Trees, CatBoost, KNN, MLP) to build a robust hybrid framework. Identified the MVO algorithm combined with the Extra Trees classifier as the superior approach for efficiently reducing dataset dimensionality while retaining critical behavioural metadata.
- **Achievement:** Achieved a highly robust peak detection accuracy of 99.62% in MVO + Extra Trees with malware detection model (Extra Trees), successfully outperforming existing baseline models and previous research methodologies in this domain. Presented the findings at the ICACSDF 2026 International Conference organized by UPES with the research paper accepted for formal publication by IEEE, the world's premier technical publisher.

Internships

India Space Academy – Remote Sensing and GIS Intern using Python May 19, 2026 - July 02, 2026

- **Geospatial Project & Problem Solving:** Tackled a grassroots drought issue in Palamu, Jharkhand by building end-to-end models for Drought Severity Mapping using VCI and Groundwater Potential Zonation using GIS-Based Multi-Criteria Analysis.
- **Tech Stack & Impact:** Used Python, Google Earth Engine API, Folium, and MODIS/Landsat-8 satellite data with cloud computing to process 15 years of data, delivering actionable insights and identifying high-potential groundwater zones for water conservation.

CodSoft – Data Science virtual internship April 1, 2026 – April 30, 2026

- **Built & Optimized ML Models:** Developed end-to-end predictive models for Titanic Survival Classification, Movie Rating Estimation, and Sales Forecasting using regression and classification techniques.
- **Data Analysis & Tech Stack:** Used Python, Pandas, NumPy, and Scikit-Learn for EDA, data preprocessing, and feature engineering on structured datasets like passenger details, movie genres, and ad spend to achieve strong accuracy.

Certifications & Courses

- Certificate of Appreciation (Paper Presentation - ICACSDF 2026) – UPES & IEEE UP Section
- Summer Internship Training in Remote Sensing & GIS Using Python – India Space Academy
- Certificate in Advanced Python – COCE
- Data Science Internship – CodSoft
